# UP AND ABOVE

Superlative ceiling designs  
that will make you look up for more.

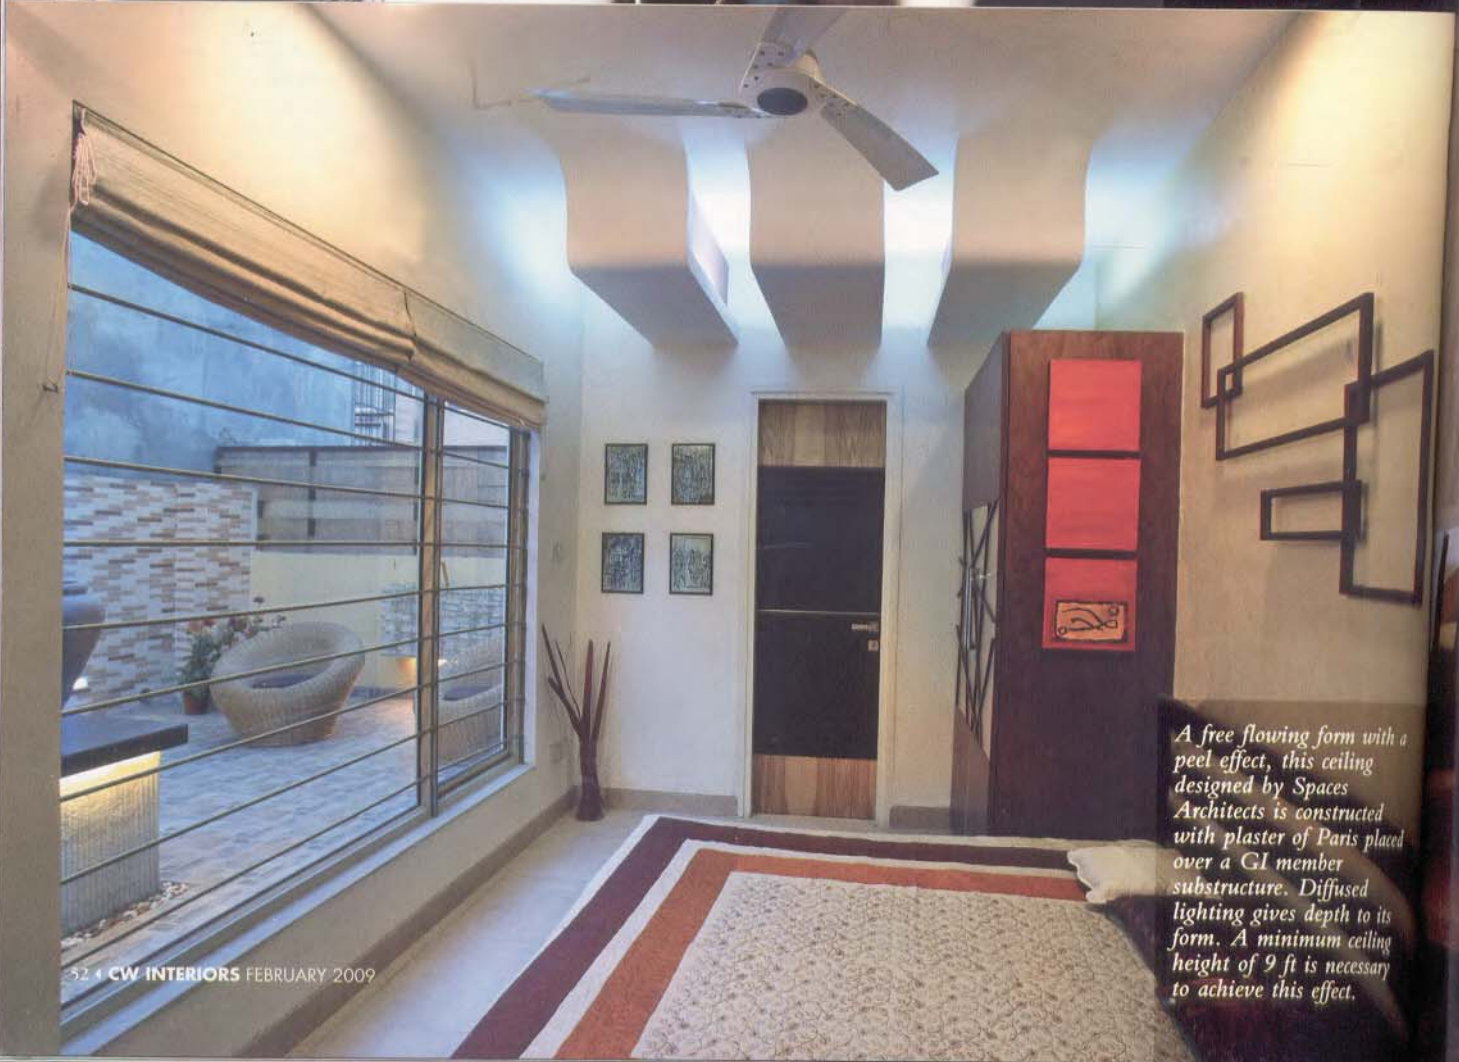

*Resembling the crosssection of an aircraft, the elliptical lounge of Silver Tube restaurant in Bengaluru designed by Planet 3 Studios, is constructed out of hollow sections of tubular steel with a galvanised sheet forming the ceiling skin. It is clad with soft, faux leather quilting on the inside and straddles a terrace furnished with conventional seating and relaxed, lounge beds. Effect lights create psychedelic patterns on the ceiling and walls.*

Rich, wood veneer cladding in this ceiling at Club LN designed by Planet 3 Studios, evokes the nostalgic charm of the colonial clubs of yore. But contemporary rendering in the form of undulating, wave-like beams, blurs the boundaries between the ceiling and the walls, to create a cosy cavern. This space sculpting from the walls to the ceiling with glass-wool insulated, veneer-clad beams makes this environment acoustically superior. The asymmetrical wave forms scatter and spread sound, to ensure optimal reverberation and elimination of high and low pockets.

A free flowing form with a peel effect, this ceiling designed by Spaces Architects is constructed with plaster of Paris placed over a GI member substructure. Diffused lighting gives depth to its form. A minimum ceiling height of 9 ft is necessary to achieve this effect.
